

# ELN Workshop

## ELNs in the context of Researcher and Lab Workflows and Institutional Infrastructure

- Harald Kusch (Universitätsmedizin Göttingen)
  - Rory Macneil (Research Space)

ELN Workshop Berlin – 14.-15. März 2016

# Who are ELNs for?

Researchers

Labs

and

Institutions

# ELN market has become commoditized

- More and more good (Standalone) ELNs
- Improving all the time as technology develops
- Similar features and capabilities (e.g. Fred Hutch requirements)
  - Organizing Work/Notes
  - Templates
  - Uploading/Exporting
  - Importing (Images Primarily)
  - Editing/Annotating Images
  - Search
  - Version Control/Timestamp
  - Sharing
- How to distinguish?

# What researchers, labs and institutions should look for when evaluating ELNs

Does the ELN possess 'best of breed' features and capabilities?

## **AND ALSO**

Can the ELN connect to?

- A. Files
- B. Other things researchers deal with
  - Images
  - Documents
  - Specialist file types
  - Databases
- C. Repositories and archives

Is the ELN a good tool for *labs*?

- A. Collaboration
- B. Management
  - PI
  - Lab Admin
- C. Change

Can the ELN be part of tomorrow's solution as well as today's?

- A. As the infrastructure at the institution evolves
- B. When researchers adopt new tools
- C. When researchers moves between labs or the PI and lab move to another institution

# Research Data Management Tools

Electronic Lab Notebooks

Box/Dropbox

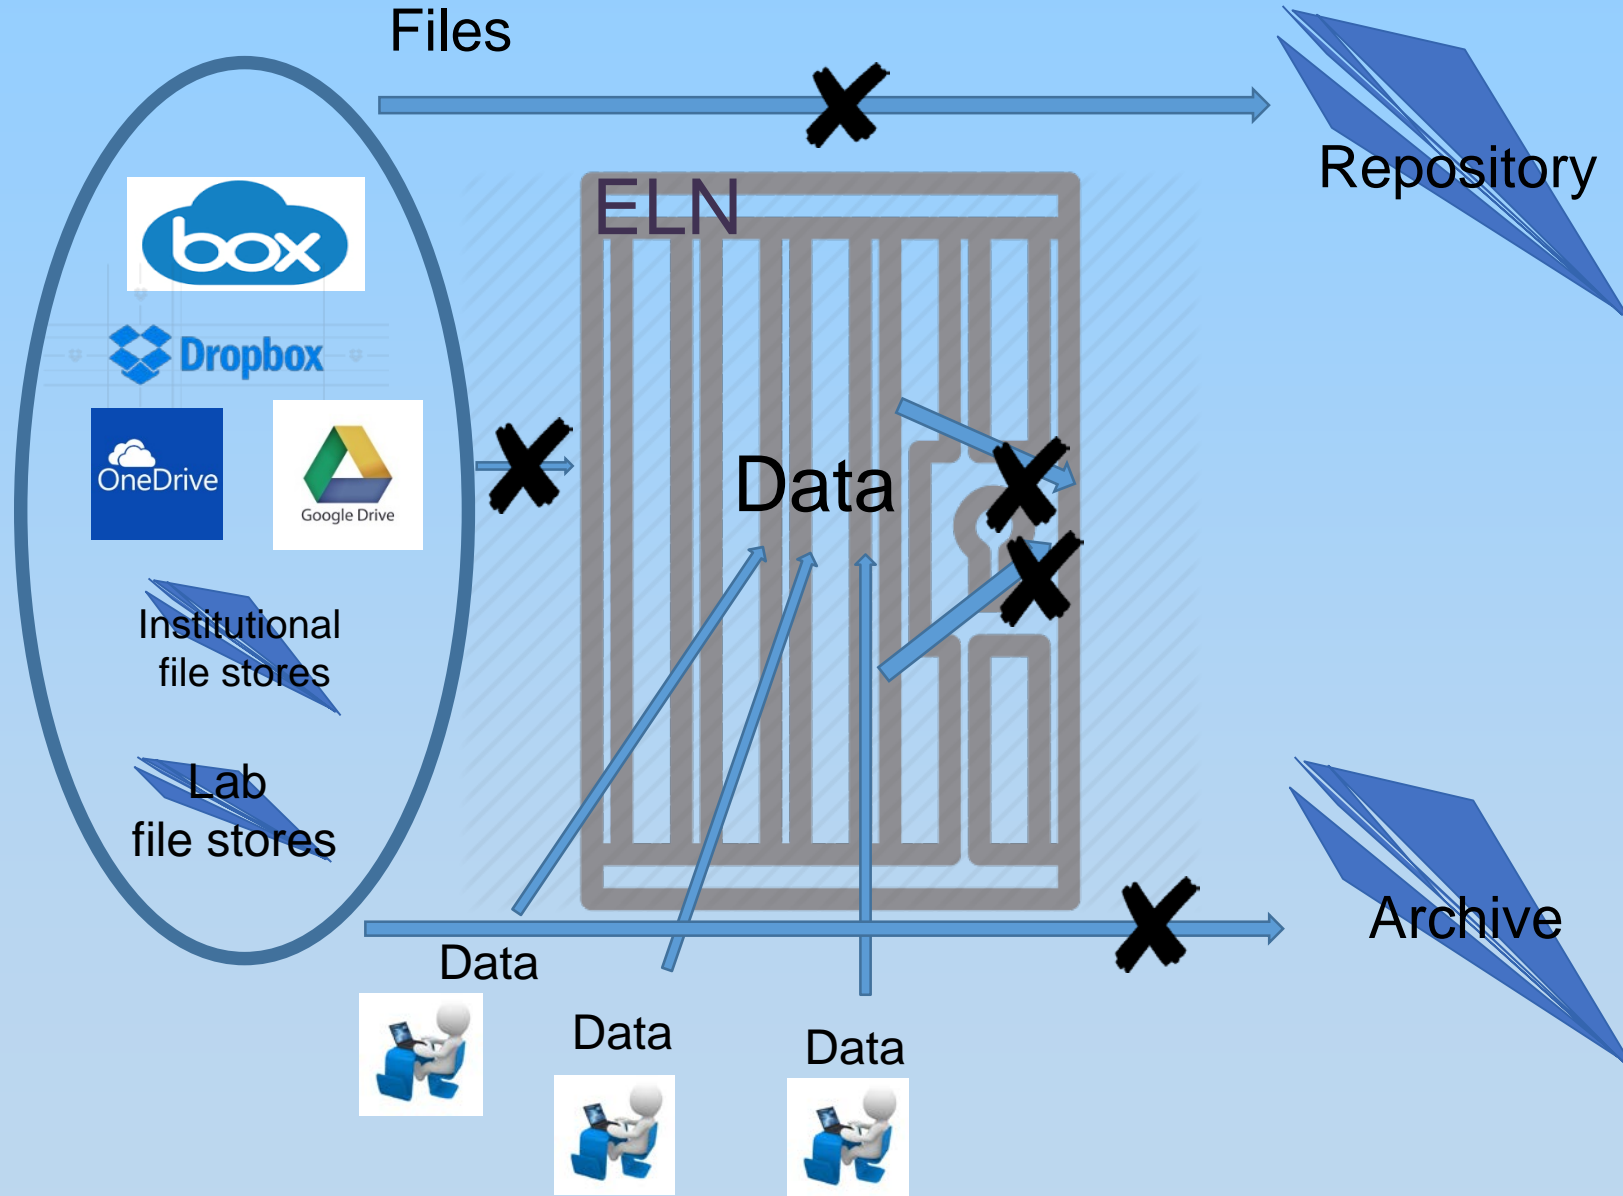

On Premises Storage

Institutional Repository

# Standalone ELN Workflow

# Result

**ELN just another silo**

Storage

Repository

Archive

ELN

**ELN does not integrate with other tools**

**Data does not get captured by the institution**

# RSpace: the first Connected ELN

Developed over 3+ years in partnership with

Released last November

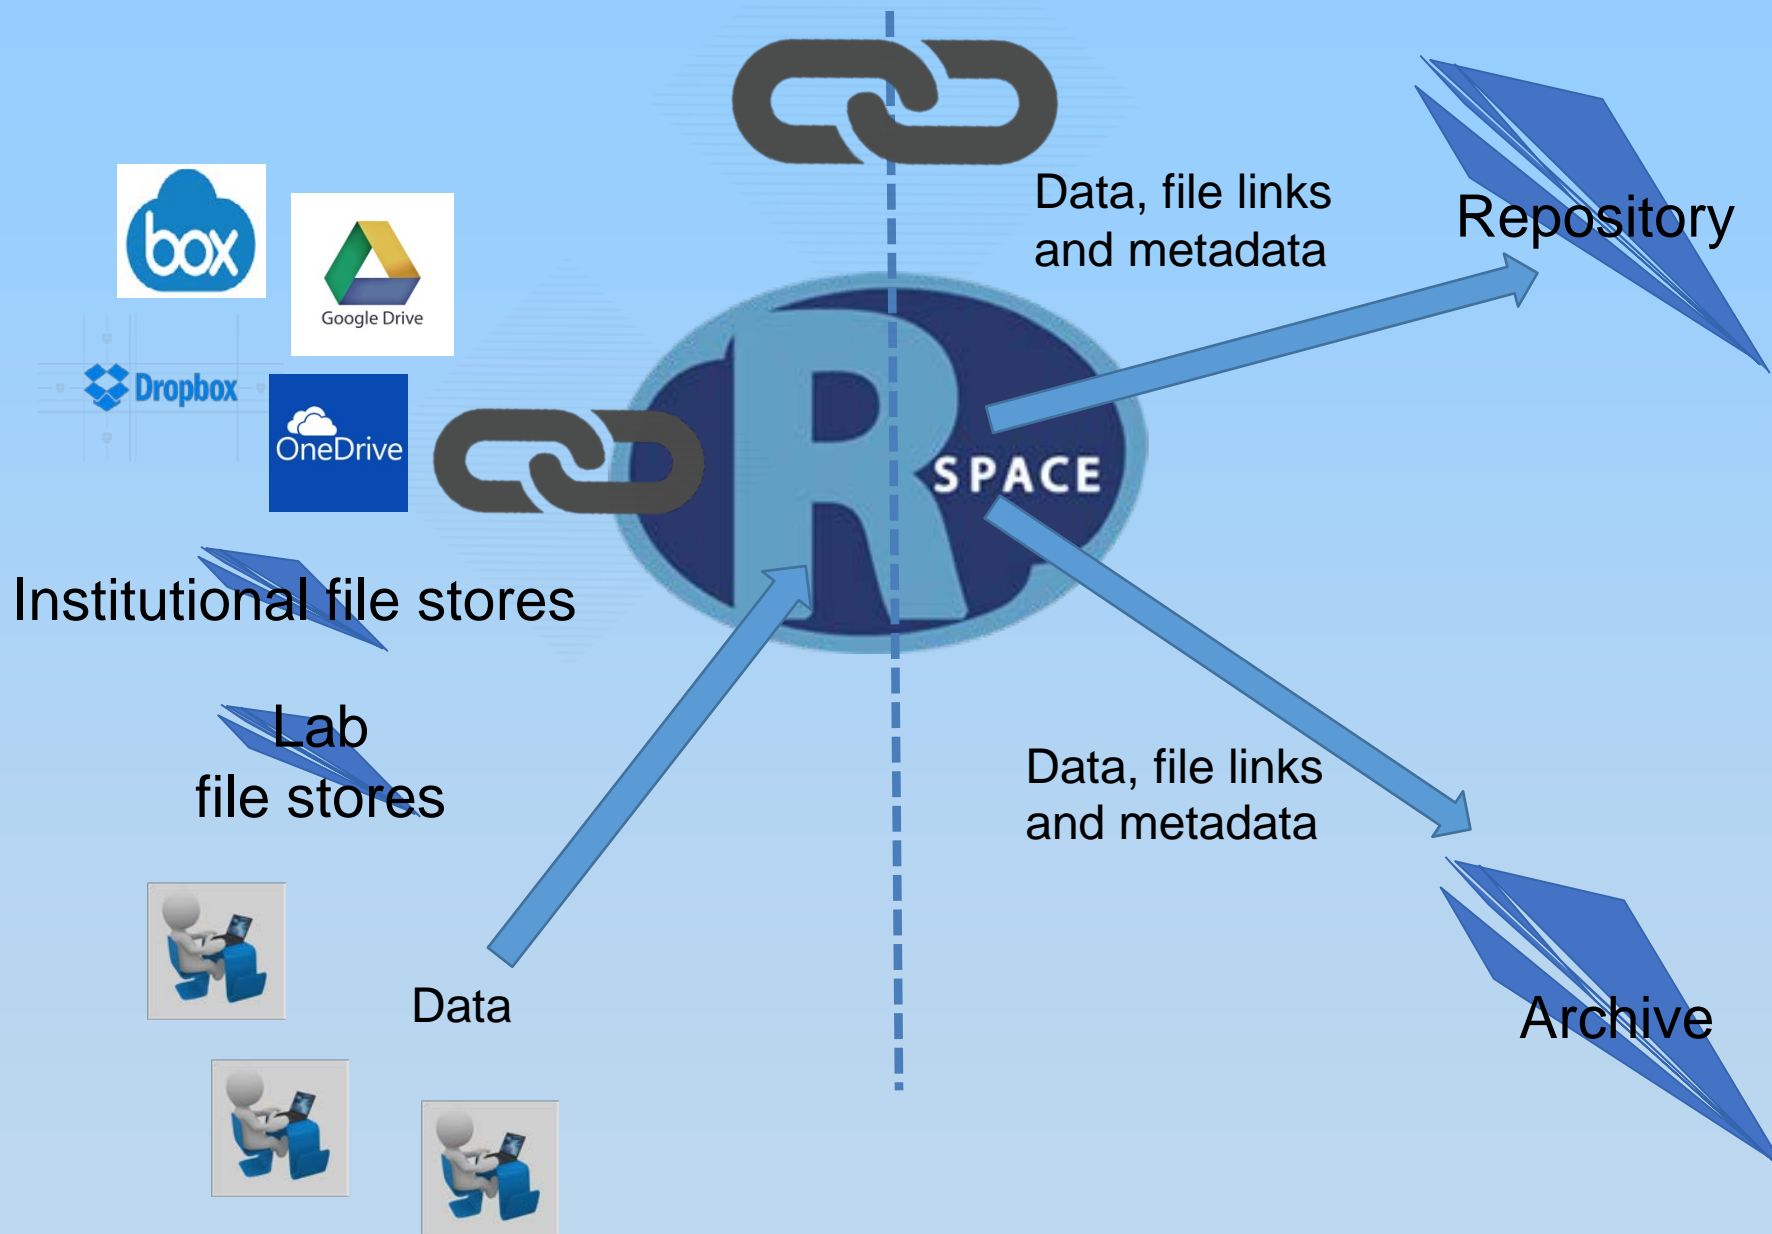

# RSpace: Best of breed user and lab ELN capabilities

- Fred Hutch requirements
  - Organizing Work/Notes
  - Templates
  - Uploading/Exporting
  - Importing (Images Primarily)
  - Editing/Annotating Images
  - Search
  - Version Control/Timestamp
  - Sharing
- Other features: signing and witnessing, snippets
- Integrations
- PI/Lab admin control

# RSpace: The first Connected ELN

- ✓ Ability to link to external files
  - Commercial (OneDrive, Google Drive, Dropbox and Box)
  - Institutional and lab (sftp/cifs and samba protocols)
-  Ability to track changes in locations of linked files
- ✓ Ability to export to other systems (e.g. archives and repositories) via XML
- ✓ Ability to re-import data into other RSpace instances → portability and mobility
- ✓ Free Community version
- ✓ Enterprise support: LDAP, Tiered Admin, Sysadmin features

# RSpace: the first Connected ELN

# Max Planck Institutes and Researchers

World leading research

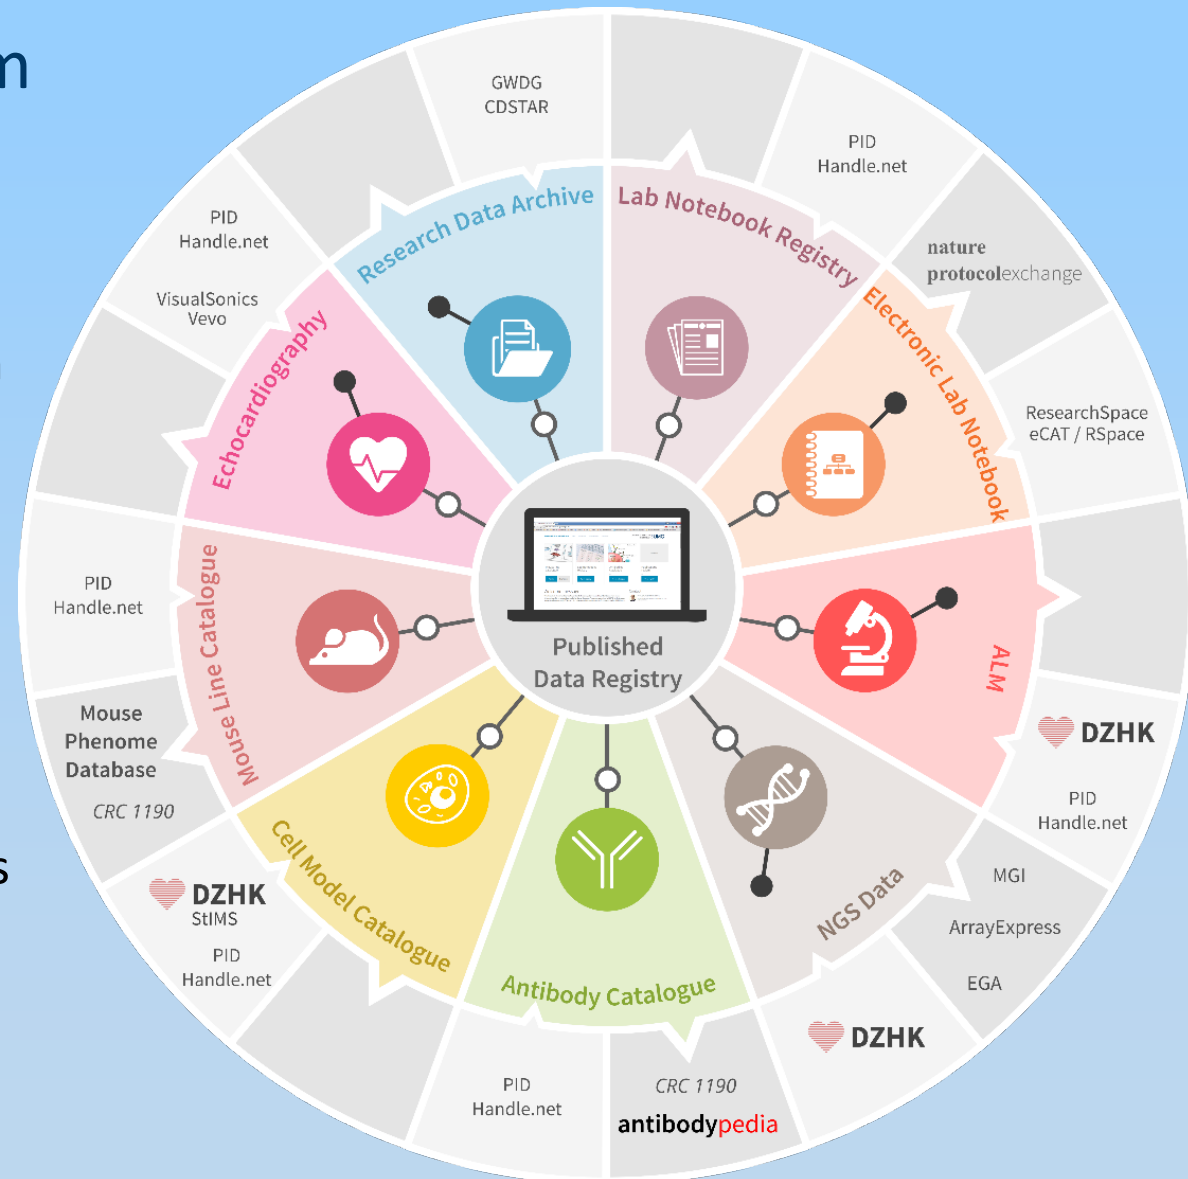

Requires world leading research tools  
for today  
and tomorrow

## Collaborative Research Center (SFB) 1002

- „Modulatory Units of Heart Insufficiency“ (Funded by the DFG since 07/2012 with 10 Mio. €)
- 16 scientific subprojects: research groups from
  - University Medical Center Göttingen
  - MPI for Dynamics and Self-Organization
  - MPI for Biophysical Chemistry
  - with focus on basic research with mice and cell lines
- INF-Project:
  - Headed by medical informaticist (Sara Nußbeck) und molecular biologist (Blanche Schwappach)
  - Research focus on introduction and evaluation of an Electronic Laboratory Notebook (and a Research Data Platform)
  - Pilot ELN-introduction in four research groups

## CRC 1002 Research Data Platform

- Establishment of CRC 1002 Research Data Platform (modular approach)
- Collection and interconnection of research data used in publications
- Persistent resolvable access and long-term archiving of CRC 1002 data
- Data standardization for submission to public repositories
- Data access: Development of Use & Access Policies

## Research questions

- Can a paper-based lab notebook be substituted by an ELN?
  - Which software and hardware is suitable?
  - Which framework / infrastructure is necessary?
  - What are aspects to consider?
  - What could be possible pitfalls and drawbacks?
  - Aim: Give recommendations!

EMBO Reports:  
[doi:10.15252/embr.201338358](https://doi.org/10.15252/embr.201338358)

eGMS:  
[doi:10.3205/mibe000162](https://doi.org/10.3205/mibe000162)

## Challenges: Introduction of an ELN in academic research environments

- No routine workflows (basic research)
- Dynamic working structures (heterogeneous methodology)
- High dynamics of interdisciplinary team composition
- Data management/access policies rarely defined

## Challenges from an IT perspective

### **Anticipated challenges**

- Acceptance of users (Anything new means investment [time and resource-wise] plus changing habits)
- Soft- und hardware decisions
- Development of metadata schemes → for structured and standardized data documentation

### **Not anticipated challenges**

- Delay in ELN introduction caused by differences in IT- facilities in different institutes
- Underestimation of the conceptualization of the structure for data documentation

## IT requirements – potential drawbacks

- Stable WiFi connection
- Sufficient storage capacity
- Linking net storage devices
- Long term archiving of data

## Aspects to consider: data structure in the ELN

- Should not be too complex to hinder sorting of data entries and therefore prevent writing them down.
- Should be easy and traceable for the PI
- The ELN offers many new possibilities (integrated search, linking of study objects, methods and results)
- Can support the writer in his/her thoughts (for theses writing, publications, grant proposals, reports by providing the structure -> intro, M&M, results, discussion, conclusion)

## How to document in the ELN (structure)?

- Paper-based lab notebook:
  - Chronologic like a diary
- ELN:
  - Chronologic like a diary
  - Project and work package-oriented
  - Sorted according to used methods

## How to document in the ELN (metadata)?

- Necessary for the management of large data volumes
  - Provide structure and harmonization for research data
  - Relevant for queries and speed of receiving query results
- Provide scientific context to research data
- Increase re-usability of data:
  - Use of ontologies and controlled vocabularies (standardization)
  - secondary and meta analyses (research networks, scientific communities)

## Importance of structured data export from ELN

- Integration in institutional Research Data Management Concepts
- Exchange of data between ELN systems
- Machine readability for future “big data” analyses

## Summary

- Do not underestimate the introduction of an ELN – a useful integration in the local research data management strategy is complex
- For achieving a high acceptance amongst users, it is useful to integrate them in all processes before starting to use the ELN
- Before starting an ELN, clarify local IT-requirements at partner sites (WiFi, server architecture)
- Start with only a few ELN users as an intensive coaching is recommended
